

**Infrastructure Division, DITT, MoIC**

## **Synopsis:**

### **1. Network Infrastructure**

Highlight some of the important activities undertaken by the Government and its implications to the society and the country.

- The national broadband master plan provides detailed framework of the activities for taking fiber optics network across the kingdom. The objective is to achieve affordable, fast, secure and reliable fiber backbone for the Information Society.
- To meet all kinds of business demands, the RGoB has planned to establish another international connectivity from Gelephu.
- Under the e-government initiative, the TWAN serves all the ministries and other agencies and ensures efficient communication among them. All the Dzongkhag centers are connected to TWAN through VPN. We now have country-wide e-government infrastructure and all the e-government transactions will happen through this network.

### **2. Information Management & Security Policy**

To secure the infrastructure and information & information systems we have a policy to address all kinds of information security issues in the government. It ensures the security of information and information systems in the government. It is an international best practice. It applies to all the government organisations and can even be adopted by other organisations besides the government.
